

# RAPID- INSTANT-START- SYSTEM

*The new economy.*

*The easiest way  
to save energy.*

**THEIMER** GmbH

# THEIMER-RAPID

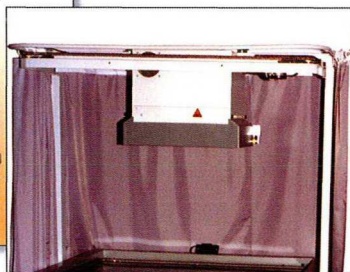

*The energy saving system for fast results.*

RAPID 5 kW

- Up to 90% energy saving compared with conventional systems.
- Short exposure times at uniform lighting.
- No heat emission between exposures.
- No noise when light is off.
- Available in units of 1 kW, 3 kW and 5 kW.

The THEIMER-RAPID-instant-start-system is the inexpensive alternative for all who are looking for short exposure times without any compromise to best possible light coverage.

As conventional copy-lamps need a few minutes after starting to reach the working temperature this lamps wouldn't be switched

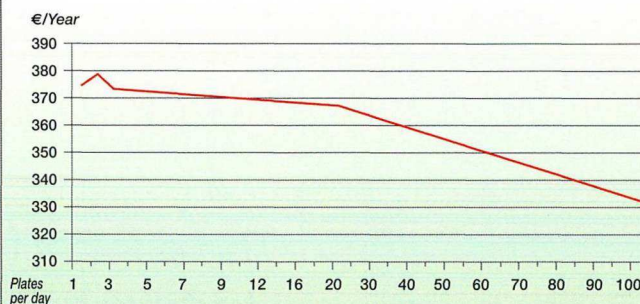

off between the exposures. This causes an increase of energy consumption which can be avoided by using the RAPID-lamp-system.

The efficient ignition system is integrated in the lamp housing. This guarantees best ignition without any problem and no transport of high voltage through a long wire.

An optimised reflector allows a short distance between lamp and vacuum frame.

Available as stand alone unit or integrated in the THEIMER-copyframes. These units provide always best results at lowest costs.

## *Saving of RAPID compared to standard system*
